FARVISOR

Compact Television Camera

FARVISOR gives you the possibility of modern observation techniques

It extends the naturally limited human power of observation and recognition. Anywhere the FARVISOR is placed it will observe for you. It informs you visibly of the movements of traffic at gates, ramps and in car parks and can observe what happens in banks, hospitals and surgeries. It brings far away and unrecognisable objects close and clear. It can control automatic production and conveyor belt systems and it expands the effectiveness of sales promotion conferences. For all these and many other applications the FARVISOR is the economical solution. The camera costs only a little more than 8 mm cine equipment and can be simply connected to a video monitor which can be anything up to 500 yards from the camera.
