

THE Hitachi DK-5000 SERIES

A SMALL 3 TUBE COLOUR CAMERA FOR MEDICAL & LABORATORY USE

This camera has been specially designed and produced to view the image as the human eye does...and the pictures are then displayed conveniently on a colour monitor which makes it ideal for surgical, microscopic inspection and other specific applications.
Detailed below are just a few of the outstanding features of the Hitachi DK5000 series.

The camera head combines a 3-tube design and yet is ultra light and small and can be easily handled and installed directly on to a microscope.

The ⅔-inch separate-mesh Chalnicon* or Saticon* tubes and improved electronics give 550 lines of resolution at the image centre.

The camera combines separate R G and B video outputs for use with an RGB monitor.

Fine colour tone matching. Colour sync generator (PAL-B) allows completely independent camera operation. Built in colour bar generator.

These and many other optional features are combined for the first time in a camera which can be fitted with a 1.5-inch viewfinder and lens for live camera applications. Where microscopic applications are required the Model DK5001 (which is the same as the DK5000) is available with a 90 degree rotation in the mounting angle

Among the optional accessories which are available for this series are a microscopic adaptor, surgeons microscope adaptor with auto iris, automatic light control unit, and fibrescope adaptor.

Hitachi have a fully detailed technical leaflet available on this series.
