Sister Camera to SK-110 Studio Camera Additional Functions in Small and Light Camera Head

The SK-120 is a small-size, light-weight (30 kg) studio/field camera using 1-inch pickup tubes, provides the same full auto setup functions as the SK-110 studio camera, and can be used in the SK-110 camera system. Additional functions such as the world-first, on-line, real-time compensation circuit for the mis-registration caused by variations of lens focusing/zooming, and a head memory which enables scrambling use of multiple cameras are built in the camera.
The camera series of SK-110, SK-11, SK-97, SK-970, and SK-120 developed in this order can be connected one other in a total camera system and used for various applications. Above all, the SK-120 is the most suitable for studio/field applications with its excellent picture quality and ease of operation.

OPERATING SYSTEM

*1 For details, refer to the brochure of each camera.
*2 The SK-120 can be connected to SU-110, CU-110, and RU-110, however, the controlled parameters are the same as in the SK-110 camera system in this case.
