

VIDEO BOARD B-043128-01 receives composite video via common-mode interference rejector L2 from the camera, and grid-modulates the c.r.t. CRISPNESS control provides adjustable h.f. boost for enhanced picture definition. C.R.T. cathode receives a fixed potential set by panel and preset brightness controls, and blanking. Line and field rate pulses are generated to drive the 4-can Board.
